

Aggre-Spec V6™

Faster and
Easier

GreyStone's advanced **Aggre-Spec V6™**

re-blending system offers the same **profit-enhancing benefits** as our popular Aggre-Spec control systems – **with greater computing power and more user-friendly visuals.**

With the **Aggre-Spec V6**, you get greater efficiency and ease of operation because what took four or five pages to view now can be analyzed on **ONE screen**. And producers can access the **Aggre-Spec V6** from their laptops for **seamless control**.

The Aggre-Spec V6 will help you immediately. Here's how:

- **Increases production** by up to 15 percent
- **Re-blends up to 2-spec products simultaneously** using single or twin tank controls
- **Holds tight product specifications** and reduces the possibility of out-of-spec material
- **Offers simple product spec changes** and multi-tasking capabilities with Windows®-based programs
- **Displays real-time FM and yield graphs**
- **Stock pile analysis** checks finished product against expected products and input settings.
- **Report module** collects data, including FM, yield, feed gradation and output gradation, and stores in spreadsheet format for flexible reporting.

The **Aggre-Spec V6** is another example of how **GreyStone's One Team approach** to engineering, manufacturing, installation, service and support **continues to benefit our customers.**

Contact us for the most efficient way to make more spec product with GreyStone classifiers, featuring the patented **Aggre-Spec V6** sand re-blending system.
